

## USEPA and RAIS Screening Level Calculator Training for Chemical and Radionuclide Risk Analysis

### Course Comments

October 1-4, 2019

Oak Ridge National Laboratory, Oak Ridge, TN

"I really enjoyed the course and I wish I could have stayed for the RAD portion. You and your team have created a great tool and I can't wait to start using it." Catalina.

"Thanks again for running a great training course. Even though I have turned to the RAIS system for years, there is much more stored there than I ever realized." David.

"I have been a risk assessor for over 10 years now and I have been using risk assessment calculators since (pretty much) day 1. I thought I knew what I was doing, I was so horribly wrong. This 3-day course has advanced my knowledge of the calculators exponentially." Keith.

I thoroughly enjoyed the RAIS class and feel much more confident using the online calculators for site specific scenarios. It is my hope to continue to study the materials given for the course and become even more fluent so I may be able to impart some of my knowledge to others within my agency. All of the instructors made themselves available for instruction as well as networking and very approachable. Questions were answered readily. I would highly recommend this course to anyone in the field of environmental remediation. Sandra.

"Like many of the other participants, I had been using the USEPA and RAIS calculation tools for years but did not realize there were so many resources available to users. I'm in awe of the programming required to maintain the web pages/tools." Estelle.

"I really enjoyed the Risk Assessment calculator training and the ORNL tours. With the aid of your professional team you were able to take a difficult subject and make it easy to understand. I like how you were able to engage everyone. We all had different levels of expertise in risk assessment, yet we were all engaged in the training and actively participating asking questions and writing notes." Heriberto.
